

Camelina: a Cash Cover Crop Enhancing water and soil conservation in MEDiterranean dry-farming systems

4CE-MED project
*aims at developing
Mediterranean innovative,
diversified and resilient
farming systems not
competing for land with
actual food chain, following
a participatory approach for
identifying smallholder
needs.*

4CE-MED system
*are modified conventional
farming systems including
camelina, a promising
oilseed crop for Europe, as a
cash cover crop which might
increase farmers' revenue
while enhancing soil and
water conservation.*
